

SEAN LENNARD A. ORIAS

seanoriasx@gmail.com | Philippines

EDUCATION

Lyceum of the Philippines University – Cavite

Bachelor of Science in Information Technology

TECHNICAL SKILLS

Systems & Hosting: Linux, WHM, cPanel, CyberPanel, Cloudflare, Hostinger, Domainmod, DNS, Active Directory

Support & Security: VPS migration, BeDesk, troubleshooting, documentation, log analysis, server monitoring, access control, Microsoft 365, Google Workspace

EXPERIENCE

StartupLab Business Center & AI Consulting Agency OPC | *Server Administrator Intern* (January 26 – April 15, 2026)

- Executed end-to-end migration of one client's website and business email environment from legacy WHM/cPanel hosting to Hostinger/CyberPanel, including backups, DNS pointing, mailbox provisioning, delta resynchronization, permissions, and post-cutover validation.
- Implemented and troubleshoot AI chatbot deployments across StartupLab and client websites by configuring cron jobs, ingestion workflows, branding, and backend integrations.
- Administered hosting environments using WHM, cPanel, Cloudflare, Hostinger, and Domainmod; performed log cleanup, disk-usage audits, temporary-file maintenance, and uptime monitoring to support 99% availability targets.
- Diagnosed and resolved technical issues involving email delivery, Spamhaus incidents, webmail access, ticketing systems, and client-side mail configuration, including on-site support during server transition.
- Authored 60+ help center and internal knowledge-base articles on domain management, DNS, website connectivity, business email, security, and server operations to improve self-service support and team documentation.

CERTIFICATIONS

Professional Certifications

- IT Specialist — Databases (2024)
- SAP Business One (2023)
- Certified Cloud System Analyst [CCSA] (2026)

Coursera

- Google AI Essentials (Completed 2026)
- Google Cybersecurity Certificate (In Progress)

PROJECTS

Capstone Project — Programmer *Disaster Preparedness Game System*

- Developed a disaster preparedness game in Unity using C#, handling all frontend and backend implementation including game logic, player controls, mini-map system, and overall gameplay mechanics.

Android Bill-Splitting App *Personal Project*

- Developed a custom Android bill-splitting application tailored for a small user group, enabling accurate expense tracking, automated cost sharing, and simplified group payment management.
