SUMMARY

IT graduate with internship experience troubleshooting email delivery, webmail access and hosting issues, migrating a client's website and business email, and writing 60+ help-center and KB articles. Built a Windows Server 2025 / Active Directory homelab covering user management, Group Policy and help desk tickets.

EXPERIENCE

Server Administrator Intern | StartupLab Business Center & AI Consulting Agency OPC | Jan 2026 – Apr 2026

- Migrated a client's website and business email from WHM/cPanel to Hostinger/CyberPanel: backups, mailbox provisioning, DNS cutover, delta mail sync and post-cutover validation.
- Troubleshot email delivery failures, a Spamhaus-listed mail server and webmail sign-in issues; provided on-site support during the server cutover.
- Administered hosting via WHM, cPanel, Cloudflare and Domainmod; performed log cleanup, disk-usage audits and uptime monitoring from the Linux CLI.
- Authored 60+ help-center and internal KB articles on DNS, domains, business email, website connectivity, security and server operations.
- Deployed and troubleshot AI chatbots on company and client websites, including cron-scheduled content ingestion and backend integrations.

PROJECTS

Windows Active Directory Homelab *Personal Project* — Source on GitHub

- Built a practice IT network for a fictional 20-person company using Windows Server 2025 and Windows 11.
- Set up accounts for 6 departments, shared folders that only each department can open, and 5 company-wide policies, including password and lockout rules, automatic screen lock and a USB block for Sales.
- Worked through 6 help desk tickets (locked accounts, password resets, new starters, leavers) and wrote PowerShell scripts that automate setting up and removing user accounts.
- Found and fixed a security gap that let the help desk account reset an administrator's password.
- Wrote a PowerShell AD health report that flags locked-out, expired and stale accounts and unlinked GPOs.

Disaster Preparedness Game *Team Capstone Project — Programmer*

- Built a 3D first-person Android game in Unity (C#) set on the LPU – Cavite campus: earthquake and typhoon drills in 4 buildings, touch controls, a mini-map and route guide, safety guides and collectible items.
- Added school-email login with one-time codes, cloud saves with offline play (Supabase, PostgreSQL), and a Windows content manager that publishes level updates without a new app release.

TECHNICAL SKILLS

Windows & Active Directory: Windows Server 2025, Windows 11, Active Directory users and groups, Group Policy, DNS, DHCP, folder permissions

Web Hosting & Servers: cPanel, WHM, CyberPanel, Hostinger, Linux command line, backups, scheduled tasks, monitoring

Domains & DNS: Cloudflare, Domainmod, DNS records, moving live domains between servers

IT Support: Email delivery problems, spam blocklists, webmail access, BeDesk ticketing, Microsoft 365, Google Workspace

Scripting & Documentation: PowerShell, Bash, JavaScript, C# (Unity), technical writing

CERTIFICATIONS

Certified Cloud System Analyst [CCSA] (2026)
Google AI Essentials, Coursera (2026)
Google Cybersecurity Certificate, Coursera (2026)
IT Specialist – Databases, Certiport (2024)
SAP Business One, SAP (2023)

EDUCATION

Lyceum of the Philippines University – Cavite
Bachelor of Science in Information Technology - 2026
