SUMMARY

Information Technology graduate with a completed three-month server administration internship covering live hosting administration, an end-to-end website and business email migration, support ticketing, and technical documentation. Hands-on with cPanel, WHM, CyberPanel, Cloudflare, DNS and Linux, and writes vanilla JavaScript to automate repetitive work. Seeking a first full-time role in systems administration or technical support.

EDUCATION

Lyceum of the Philippines University – Cavite

Bachelor of Science in Information Technology

TECHNICAL SKILLS

Hosting & Servers: Linux CLI, WHM, cPanel, CyberPanel, Hostinger, VPS migration, backups, cron jobs, log analysis, disk-usage audits, uptime monitoring

DNS & Network Edge: Cloudflare, Domainmod, DNS records, domain management, live-domain cutover

Support & Workplace: Email delivery, Spamhaus incidents, webmail access, BeDesk ticketing, access control, Microsoft 365, Google Workspace, Active Directory fundamentals

Scripting & Documentation: Vanilla JavaScript, DOM and WebCodecs APIs, userscripts, C#, Unity; technical writing (60+ knowledge-base articles)

EXPERIENCE

StartupLab Business Center & AI Consulting Agency OPC | *Server Administrator Intern* (January 26 – April 15, 2026)

- Executed end-to-end migration of a client's website and business email from legacy WHM/cPanel to Hostinger/CyberPanel: backups, DNS pointing, mailbox provisioning, delta resynchronization, permissions, and post-cutover validation.
- Implemented and troubleshoot AI chatbot deployments across StartupLab and client websites by configuring cron jobs, ingestion workflows, branding, and backend integrations.
- Administered hosting environments using WHM, cPanel, Cloudflare, Hostinger, and Domainmod; performed log cleanup, disk-usage audits, and uptime monitoring to support 99% availability targets.
- Diagnosed and resolved technical issues involving email delivery, Spamhaus incidents, webmail access, ticketing systems, and client-side mail configuration, including on-site support during server transition.
- Authored 60+ help center and internal knowledge-base articles on domain management, DNS, website connectivity, business email, security, and server operations.

PROJECTS

Twitch Emote No-Restart

Personal Project — [Published on Greasy Fork](#)

- Vanilla JavaScript, userscript, Web Worker, OffscreenCanvas, MutationObserver, WebCodecs ImageDecoder, createImageBitmap, requestAnimationFrame, canvas overlay, GM_xmlHttpRequest CORS fallback, elementFromPoint occlusion, CSS clip-path, LRU bitmap cache (192 MB budget), per-frame time budgets, performance profiling. 1,927 lines, zero dependencies, GPL-3.0.

Git Publish Automation

Personal Project — *Bash* — [Source on GitHub](#)

- Bash, Git, git status porcelain parsing, branch and merge/rebase preflight checks, pull --rebase recovery, no force-push, dry-run mode, watch mode with debounce, shell alias.

Capstone Project — Programmer

Disaster Preparedness Game System

- Unity, C#, game logic, player controls, mini-map system, gameplay mechanics, frontend and backend implementation, team capstone.
